

Disaster Recovery for the Mid-size Enterprise

Continuity planning, or more commonly known as disaster recovery, is one of the top four concerns for business today in addition to collaboration, compliance and cost. Fortis & File Magic Disaster Recovery actually replicates and provides real-time disaster recovery at the byte level while offering continuous high availability of data and documents if a disaster occurs.

Fortis Disaster Recovery uses Double-Take technology to replicate and provide high availability of data and documents

Double-Take protects data and applications such as Fortis and File Magic enabling customers to replicate and protect mission-critical data that resides throughout their enterprise. It combines continuous real-time backup and automatic failover capabilities for disaster recovery, high availability, and centralized backup.

Double-Take is Microsoft Windows 2000 and 2003 certified at all levels, one of the few replication products to have achieved this level of certification. It delivers better protection than many hardware-based solutions, and it costs tens of thousands less.

Double-Take Benefits:

• Real-Time Data Protection

Replicates continuously at the byte level over any shared or private IP-based LAN, WAN or SAN, ensuring that changed data is protected and can be quickly restored at all times

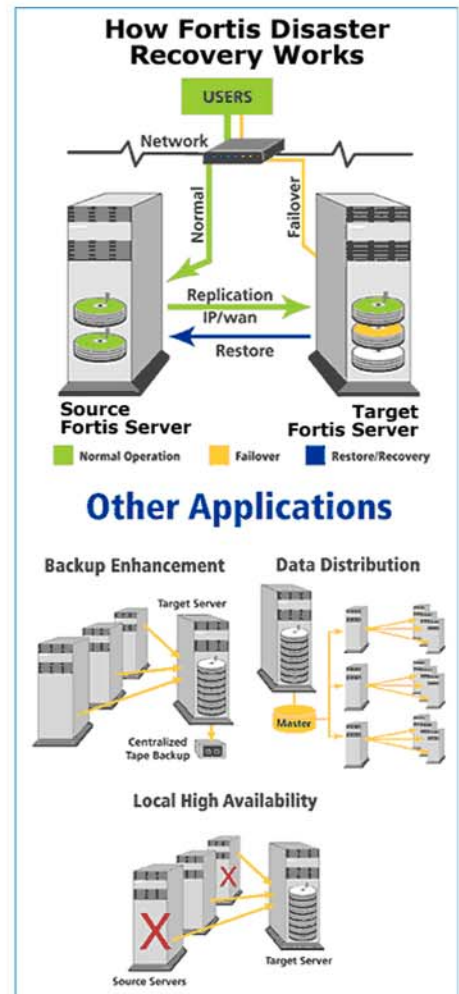

• Application Agnostic

Works with your existing hardware to protect applications such as Fortis and File Magic

• Continuous Data Protection

Guarantees business continuity and high availability by restoring access to data in minutes with failover capabilities to maintain a seamless working environment
